

FUTURE  
IS HERE.  
ALWAYS.

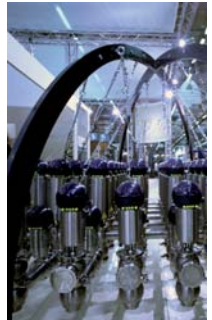

CIBUS**TEC**2009

PARMA - ITALY  
27 - 30 OCTOBER 2009

**IN PARMMA**, capital of the Food Valley and -since December 2003- seat of the European Food Safety Authority, food technology and quality come together from 27<sup>th</sup> to 30<sup>th</sup> October 2009 at Cibus Tec, one of the largest specialized exhibition in the world and surely the most complete, where every two odd years the international food industry meets the new world of technological advances and applications, the most innovative plants in food processing and packaging, research and development, and logistics. Cibus Tec is the perfect chance to get up to date thanks to a qualified and privileged point of view, a detailed and rich programme of conferences, workshops and official congresses, in the very special frame of one of the most important world food district.

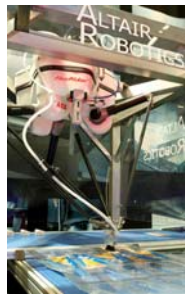

## TECNOCONSERVE

Tecnoconserve is the most important world exhibition on the technology for vegetable preserves. More than 65 years after the 1941 première, this important event still leads the field, presenting the complete technological panorama of the vegetable sector within the context of Cibus Tec. Tecnoconserve is the only Show in the world where professionals can see the entire flow chart of vegetable processing from picking machines to selection and processes, from filling and packing to packaging and transport, comparing different technological solutions.

Tecnoconserve confirms the trend to aim at total quality and provide ready-to-use and complete cycle systems. That's the place where the Processing Tomato Industry and Technology are really on stage. Tecnoconserve also presents plants and machineries for fish and meat processing, 4<sup>th</sup> range, fruit juices, and it's constantly involved in the analysis of the new trends from a technological point of view. The event also promotes one intensive day dedicated to the processing Tomato: Tomato Day, where opinion makers and professionals will focus on innovation, marketing, consumption and developments in scientific research. The event is organised in association with AMITOM.

# TOMATO WORLD

Starting from 2007, thanks to an active collaboration and a profitable agreement between Fiere di Parma and the past owner of the Show Piacenza Expo, Tomato World has a new location in Parma in the same context of Cibus Tec. Tomato World completes the Tomato chain, usually shown at Tecnoconserva, adding a complete panorama for the farmers' satisfaction, from seeds and cultivation products to machines for agriculture and picking.

During the even years the event changes into Tomato World Forum, an exhibiting conference held in Piacenza, focused on the dynamics, trends and characteristics of the Mediterranean market; in 2008, the event is scheduled in November from 27<sup>th</sup> to 29<sup>th</sup>.

## MILC

Nearly 30 years after its debut, Mile is now one of the strongest events in Cibus Tec. Nowadays, it is the most important exhibition in Europe aimed at the milk and dairy sector and absolutely the leader in the area of pasta filata and typical hard cheeses.

## MULTITECNO

Multitecno is focused on intersectorial technologies and on those aimed at all related aspects of the food industry. It features technologies which horizontally affect a great number of food production processes such as logistics, hygiene, laboratories and instruments, analysis and control systems, liquid processing and packaging.

The rendez-vous for  
Cibus Tec is in Parma  
from 27 to 30 October 2009
